Kodin Code Session Report - Sujal Bharti

Date: 9/17/2026, 2:17:02 PM

QUESTION

```
Demonstrate Single level Inheritance in Java .
```

Question images

AIM

```
To Demonstrate single level Inheritance in Java
```

ALGORITHM

```
Step 1: Start
Step 2: Create a class animal
Step 3: Create a class dog which extends the animal class
Step 4: Then create a class untitled with objects dog d1
Step 5: End
```

SOLUTIONS

File: untitled.java

```
class Animal
{
    String name;

    void show()
    {
        System.out.println("Inside show method");
        System.out.println("Name:"+name);
    }
}
class Dog extends Animal
{
    int age;
    void Eat()
    {
        System.out.println("Eats Dog food");
    }
}

class untitled
{
    public static void main(String[] args)
```

```
        {
            Animal a1=new Animal();
            a1.name="Big Animal";

            Dog d1=new Dog();
            d1.name="Dog";
            d1.show();
            d1.Eat();
        }
    }
```

PROGRAM OUTPUT

```
    ========== untitled.java ==========
    Inside show method
    Name:Dog
    Eats Dog food
```

CONCLUSION

We have sucessfully learn how to implement to demonstrate the single level inheritance in java
